

Haldane

visibly superior glazing beads

Haldane UK has gained its **unrivalled reputation in the glazing beads market** thanks to its unique blend of advanced machining technology and its highly skilled craftsmen.

Haldane offer an extensive range of glazing beads, which is second to none, through a combination of innovative style and our ability to machine any commercially available timber. Added to the fact that our core range of beads are fire rated to half hour and full hour standards, we offer a product that is visibly superior.

We have worked hard to successfully extend our highly respected reputation to our full range of glazing beads from straight beading, squares and ladders through to the increasingly popular D-shaped, capsule and elliptical beads.

Indeed, such is the volume of production and the resulting economies of scale, that many of our customers find it cheaper and more efficient to outsource their straight square frames to us.

the only limitation is your imagination

Bespoke Glazing Beads

We also offer a bespoke service with a portfolio of designs that would astound even the most creative designers, including flash designs, flags, letters of the alphabet and even cloud shapes.

Our enviable position in the market is based on our ability to out perform in the key areas that our customers have told us are crucial characteristics in their supplying partner; quality, service, efficiency and innovation.

Our commitment to quality is reflected in our continuing investment in the latest 5 axis CNC technology to ensure the consistency and accuracy of our glazing beads cannot be matched.

Our business is focused on delivering world class customer service, which is demonstrated in our market leading turnaround times, and the ability to supply our beads in a variety of finishes, for example pre-sprayed.

To ensure our market leading quality of service levels are maintained we have to be super-efficient. We have therefore redesigned the entire glazing bead production process from enquiry through to production through to packaging and delivery to maximise efficiency and capacity.

To stay ahead of the competition you must be innovative and we have achieved numerous industry firsts including our core range of glazing beads achieving half hour and hour fire rated status in accordance with BS476, and in being the first accredited supplier of glazing beads under the BWF Certifire Scheme.

Fire Rating

Haldane UK is committed to ensuring that its full range of glazing beads achieve fire rating status.

Our achievement in becoming the first accredited supplier of timber glazing beads under the British Woodworking Federation's Certifire Scheme has only inspired us to aim higher and becoming the first supplier of fire rated glazing beads underlines our confidence in our products and our commitment to our customers.

Haldane Security Glazing Bead

The Haldane security beading system has been developed to meet the demands of an ever-cautious public. Designed to prevent the glass from being removed in the unlikely event of the external bead being removed, the beads are available in any shape and commercially available timber.

From local governments, to door manufacturers to security companies, our security beads system has been incorporated into external doors made from a variety of timber to provide an extremely secure environment that gives comfort and peace of mind.

Construction

The Haldane security bead system has been designed to be extremely tough and durable yet boasting extremely pleasing aesthetics.

The external bead is moulded to provide a drip mechanism. The door section is stepped to allow the glass to sit below the external bead, thus receiving protection from the intruder. The internal bead is styled to reflect the external bead, however it is larger to cover the glass.

FastTrack Glazing Beads Service

Haldane UK transformed the manufacturing process for glazing beads with our revolutionary 8 finger jointed technique and our ability to manufacture hundreds of beads per week to unrivalled accuracies using state of the art timber machining technology.

With our FastTrack Service we have once again set new standards in the industry to meet the ever increasing demands of your clients who want your products quicker and cheaper than ever before.

By creating a standardised product range, in the most popular of timber we are allowing you to gain all the benefits of our economies of scale without compromising on quality.
